

APPLICATION

The Tractel HT46 safety harness is a multi use general purpose fall arrest height safety piece of equipment. All Tractel height safety harnesses meet and in most cases exceed the requirements of European standard EN 361. They provide optimum ergonomics, and are comfortable when used for long duration interventions.

These multi use harnesses provide a good position compromise between the standard range and application specification technical harnesses.

Tractel is the first height safety equipment manufacturer to introduce a complete range of safety harnesses comprising two to four fastening points, with mountain harness type leg straps which are highly appreciated by users for their comfort and ease of fitment.

This product is designed and certified for loads up to a maximum of 150 kg.

DESCRIPTION

Combines the four anchor points, highly versatile.

With its two thoracic fastening points, it is well suited to working situations requiring work position holding.

With its sternal fastening point, it is well suited to working situations requiring the use of a fall arrester connected on the front side of the harness.

Harness with :

- 1 back fastening point,
- 1 sternal anchorage
- 2 thoracic fastening points
- 2 leg strap adjustments,
- 2 shoulder strap adjustments,
